Veldhoven, the Netherlands adriano.tanoue@gmail.com

ADRIANO TANOUE

TEST ENGINEER QUALITY ASSURANCE SPECIALIST

GENERAL

Name	Adriano Tanoue
Date of birth	18-Sep-1984
Place of residence	Veldhoven, the Netherlands
Languages	Portuguese (native), English, French
Nationality	Brazilian
Experience since	2005

BACKGROUND

Education	
2010 – 2012	Post-undergraduate in Game Development
	PUC-PR - Pontifícia Universidade Católica do Paraná
2002 – 2006	Bachelor degree in Electrical Engineering
	FEI - Fundação Educacional Inaciana

Courses/seminars 2020	Azure Kubernetes Service (AKS) – The Big Picture – Pluralsight – Manoj Nair
2020	Getting Started with Kubernetes – Pluralsight – Nigel Poulton
2020	Microsoft Azure Developer: Performing Data Integrity Testing – Pluralsight – Aram Koukia
2020	Microsoft Azure Developer: Performing Automated End-to-end Testing – Pluralsight – Phil Jirsa
2020	Microsoft Azure Developer: Performing Unit Testing & Integration Testing – Pluralsight – Rusty Divine
2020	Microsoft Azure Developer: Performing Load Testing – Pluralsight – Mick Badran
2020	Microsoft Azure Developer: Designing a Test Strategy – Pluralsight – Scott Tate
2020	Microsoft Azure for Developers: What to Use When – Pluralsight – Barry Luijbregts
2020	Microsoft Azure: The Big Picture – Pluralsight – Matt Milner
2020	Spring Integration: Getting Started – Pluralsight – Jesper De Jong
2020	Spring Framework: Creating Your First Spring Boot Application – Pluralsight – Dan Bunker
2020	CukenFest Online - A BDD Conference – cukenfest.cucumber.io
2020	Jekyll - Static Site Generator – Mike Dane
2020	Docker and Kubernetes: The Big Picture – Pluralsight – Nigel Poulton
2020	Introduction to Spring Cloud Contract – Pluralsight – Andrew Morgan
2019	Introduction to Cypress – Test Automation University – Gil Tayar
2019	Effective Automated Testing with Spring – Pluralsight – Billy Korando
2019	Spring Framework: Spring Fundamentals – Pluralsight – Bryan Hansen
2019	Spring: The Big Picture – Pluralsight – Dustin Schultz
2019	The MERN Stack – A React CRUD Application From Start To Finish – CodingTheSmartWay – Sebastian Eschweiler
2019	React: Getting Started – Pluralsight – Samer Buna
2019	Styling React Components – Pluralsight – Jake Trent
2019	RESTful Web Services with Node.js and Express – Pluralsight – Jonathan Mills
2019	AWS Developer: The Big Picture – Pluralsight – Ryan Lewis
2019	Modern Java: The Big Picture – Pluralsight – Sander Mak
2019	Java EE: The Big Picture – Pluralsight – Antonio Goncalves
2018	CukenFest London - A BDD Conference – cukenfest.cucumber.io
2018	BDD with Cucumber and Serenity BDD – SerenityDojo – John Ferguson Smart
2018	Professional Java Development Skills for Testers – SerenityDojo – John Ferguson Smart
2017	Scaled Agile Framework (SAFe) for Teams (certified SAFe® 4 Practitioner) – Scaled Agile, Inc.
2017	Protractor: End to End testing framework for AngularJS Apps – Udemy – Rahul Arora
2017	Test Automation with Appium, Cucumber and Ruby – Udemy – Alex Petrovski
2017	The Complete JavaScript Course: Build a Real-World Project – Udemy – Jonas Schmedtmann
2017	JavaScript: Understanding the Weird Parts – Udemy – Anthony Alicea
2017	Understanding TypeScript – Udemy – Maximilian Schwarzmüller
2017	Mockito Tutorial: Learn mocking with 25 Junit Examples – Udemy – in28Minutes
2016	Master Jenkins Course For Developers and DevOps – Udemy – Renju Ratheesh
2016	Docker Technologies for DevOps and Developers – Udemy
2016	Selenium WebDriver With Java - Novice To Ninja – Udemy – Lets Kode It

Presentation Skills: Create Killer Presentations to WoW – Udemy – Jeff Tan

Behavior Driven development with JBehave – Wipro – Felipe Carvalho

2016

2015

EMPLOYMENT OVERVIEW

Period	Position	Company
Aug/2020 – present	Test Engineer	TomTom
Nov/2017 - Jul/2020	Test Engineer	WAES (allocated @ ASML)
Set/2014 – Aug/2017	QA Technical Specialist	Wipro Technologies (allocated @ Mastercard)
Jan/2013 – Sep/2014	Test Lead	Telefônica Brasil (former Global Village Telecom)
Nov/2011 - Oct/2012	QA Consultant	Cognizant Solutions (allocated @ JMalucelli Seguradora)
Sep/2009 - Nov/2011	Test Coordinator	HSBC Global Technology
Apr/2005 - Mar/2008	Test Analyst	Hewlett-Packard (former Electronic Data Systems)

	PROJECTS
Aug/2020 – Present	Test Engineer
	TomTom – Autostream
	TomTom's Autostream provides a cloud infrastructure service to provide High Definition maps
	to in-car clients.
Situation	The Autostream project is divided into the cloud-backend service and in-car client
	applications. Prior to going live into Production, the backend service was in need of a senior
	Test Engineer to help build and maintain the testing framework used in the project's CI pipeline
	to ensure fast and reliable feedback.
Task	Pick up the tasks from the previous Test Engineer in maintaining and creating new test
	scenarios for the existing and new services, while improving the current implementations.
Activities	In this role I:
	 Define, document and implement the test automation framework for the cloud services.
	 Automate test reports.
	Research alternative approaches to testing with new technologies.
Results	Achievements in this role were:
	 A well defined template for the test automation framework.
	Easy to read and maintain test code, with useful external reports.
Technologies	Azure, Java, Maven, Spring, Spring Cloud Contract, Cucumber, RestAssured, Python.
Dec/2017 - Jul/2020	Test Engineer
	ASML - Litholnsight Alignment
	Besides the lithography machines, ASML also provides software products for analysis of reserch
	and development data. One of these applications is a monolith with many tools that help
	evaluate microchip architecture strategies and provide improvement suggestions through
01 . 11	mathematical simulations.
Situation	Every tool within the monolith application is produced and maintained by different teams.
	Most of these teams struggled with testing strategies, coverage, time of execution and having
	too many manual regression tests every sprint.
	One of the teams was starting a new tool from scratch with a different approach in software
	architecture and after convincing their manager, some budget was allocated to hire a dedicated Tester.
Task	The main direct requests for this project were to alleviate the load of manual regression tests
iusk	being executed by the business analysts, and to come up with a strategy for test coverage or
	the software side.
	After the initial intake, I realized the actual task at hand was to improve the way requirements
	were defined and understood.
Activities	In this role I:
ACIIVIIIES	 Implement the test automation framework following the reference architecture.
	 Write automated functional tests.
	 Automate test reports to serve both business and development people.
	 Coach the team into BDD practices.
	 Research alternative approaches to testing with new technologies.
	 Conduct technical interviews for hires in other teams.
	 Help with defining a test approach for a technology shift to micro-services.
Results	Achievements in this role were:
NCJUIIJ	 Test strategy implementation for multiple teams, defining the functional level test
	automation framework.
	 Shaping the way requirements are understood with 3-amigos sessions to identify
	executable specification.
	 Production of living documentation that incorporates requirements, test plans and test
	results.
Technologies	Java, Maven, JavaFX, TestFX, Cucumber, Serenity-BDD, JavaScript, npm, React, Cypress,
3.00	Spring Cloud Contract, RestAssured, Python, RobotFramework.

Oct/2018 – Aug/2019 Testing Chapter Lead WAES – Organizational Structuring		
	A representative of each technical stack was chosen among the company's consultants to become the point of contact in regards to employee satisfaction, budget approvals and client management.	
Situation	WAES had been growing at an increasing rate since the first part of 2018, and internally there was no organizational structure (managing all the consultants was being done by the same person). Tasks like getting feedback from consultants and clients, setting expectations and tracking achievements were disconnected.	
	Although the growth of the number of Testers was stationary, management decided to roughly divide the consultants into chapters by technology stack (Java, .Net, Testing and Front-end), making the Testing chapter the smallest of all.	
Task	As the a Chapter Lead, the responsibilities were to maintain a warm, happy and knowledgeable chapter, assist the personal growth of chapter members, provide technical support for the sales team and specially hiring support for the recruitment team. For this role the Chapter Leaders would have to dedicate 20% of their time while maintaining 80% allocation in the client.	
Activities	 In this role I: Conducted monthly meetings with each chapter member for updates and follow ups. Review and approve study budget usage by chapter members. Worked closely with the recruitment team to come up with a workflow that would serve the technical evaluation of new candidates. Conducted technical interviews of Testing domain candidates for hiring. Trained new technical interviewers. 	
	 Help prepare newly hired Testers for clients' selection processes. Worked with the sales team to go through client feedback together with chapter members. 	
Results	Achievements in this role were: A completely revamped technical assignment that is sent to Tester candidates. Creation of an application to scale the review of technical assignments (so that every chapter member could provide a baselined assessment of the work that hiring candidates delivered).	
Technologies	 Acceleration of the Testers hiring growth to match clients demands in number and quality. Java, JavaScript, Maven, npm, React, Gatsby, Selenium, RestAssured. 	
Apr/2016 – Aug/2017	Quality Assurance Technical Specialist Wipro – Tech Specialists Initiative	
	I was part of a selected group of professionals who were considered to be the most knowledgeable about their respective area (e.g. Software Development, Project Management and, in my case, Quality Assurance) inside Wipro's Mastercard account. This team was put together with the intent of identifying any areas of process improvement or knowledge gaps within the whole account, then come up with a plan for upscaling overall quality of client delivery. The action plans could range from providing coaching and training to side projects of applications that automate repetitive managerial tasks.	
Situation	The first year focused on a survey to be answered by all employees in the Wipro-Mastercard account that pointed any pain points and area of improvements based on the participants' role in their projects. In 2017 the focus had been on the creation of an online tool to help control overtime hours for the employees working from home. The Tech Specialists team had 6 members at the time.	
Task	My role in this initiative was to make sure that not only Testers have a good understanding of Software Quality Assurance processes and methods, but also have Team Leads and Developers aware of the importance and dependencies of QA as a whole (big picture). In the overtime control app project, I had assumed the role of a Business Analyst, making sure the understanding of what is required of the system to be and what will actually be delivered are beautifully matching.	
Activities	 In this role I: Conducted weekly meetings with all Testers to check their technical needs. Provided coaching and trainings on Test Design Techniques, Testing Frameworks for Agile and Test Best Practices and Mindset. Interviewed candidates for Testing roles at Wipro. Created a tool to assess (Test and Dev) candidates competency in a quantitative manner. 	
	 Coached a backup Tech Specialist for QA. Put together documentation on environment configuration for Test Automation directed to 	
Results	 Coached a backup Tech Specialist for QA. 	

May/2016 – Aug/2017	Senior Test Engineer Mastercard – Reward Solutions
	Mastercard has many loyalty programs to help banks and business acquire, retain and grow customer numbers. Available solutions range from point-based and cash back products to household-cardholder relationship management. While on this project, the team was transitioning from one big waterfall-type group to 2-3 smaller agile-based teams. My previous experience with Agile helped guide the team on both Testing and general Development best practices.
Situation	With a growing number of members and programs using Mastercard solutions, the need for improvement in batch processing performance and new ways for customers to enroll have become mandatory.
Task	As a Senior Test Engineer, I was responsible for scripting automated tests in the regression suite to ensure all modifications in front-end and back-end did not compromise main functionalities and extract test scenarios out of new change requirements.
Activities	 In this role I: Used Maven Java projects to code automated tests with Selenium webdriver and JBehave tor user-based test design. Created and executed regression tests for batch performance enhancement changes, including test data analysis and preparation (mostly Bash and SQL). Created and executed Acceptance Criteria for the stories of a new Customizable Enrollment Widget application using Rally as Agile board and ALM. Coach Junior and Senior team members on Agile practices, while suggesting the best approach depending on the project needs.
Results	 Achievements in this role were: A comprehensive suite of automated regression tests that generate live reports in business readable presentation. Ensured quality and consistency of data out of the improved batch processes. Reduced time within iterations in creating and validating Test Scenarios as Acceptance Criteria that are concise, comprehensive and reusable.
Technologies	Java, Eclipse, Maven, Selenium, JBehave, Junit, SVN, Bash, SQL, Page Objects, Rally(ALM), Scrum, Kanban
Aug/2015 – May/2016	Senior Test Engineer Mastercard – Nomos
	Nomos was a Mastercard internal prototype project to automate the deployment of all applications to every high level environment (System Integration Testing, Pre-Production and Production). A small team was put together to take this project which consisted of a front-end AngularJS application managing and monitoring backend scripts running in Linux servers using REST API.
Situation	Every deployment from any Mastercard project required extensive planning and long hours including exploratory and sanity testing, especially when deploying into production.
Task	As a Senior Test Engineer, I was responsible for scripting automated end-user tests for the front- end Nomos application, as well as identifying and executing test scenarios for all black-box functionalities.
Activities	 In this role I: Used JavaScript projects to code automated tests with Protractor framework (end-to-end testing for AngularJS) and Jasmine. Configured live reports to be generated after each automated test suite run. Created and executed new test scenarios for the Nomos application in development.
Results	 Achievements in this role were: Mastercard's first suite of automated tests in JavaScript (Protractor) for an AngularJS application that generates live reports. A tool that greatly reduced time and cost of any deployment within Mastercard IT. ALM tool configured for the project from ground up.
Technologies	JavaScript, Protractor, Jasmine, Selenium, SVN, Bash, Page Objects, REST, Rally (ALM), Scrum.

Sep/2014 – Aug/2015	Senior Test Engineer Mastercard – In Control	
	Mastercard In Control provides a way for card issuers and cardholders to manage expenses, generate reports and create virtual cards. Every issuer and bank around the globe can have their own customized portal for Mastercard In Control. This project's team was comprised by members from US, Ireland, Brazil and Malaysia; and featured multiple applications running in different servers for the backend and many more	
Situation	configurable front-end URLs. For every new bank or card issuer program that made In Control available for its clients would have its own portal with different optional features. When new business rules included new or affected old features, extensive validations were required.	
Task	As a Senior Test Engineer, I was responsible for identifying test scenarios based on change requirements of business rules and for setting up new test environments when necessary. I also led an automation effort for all tests that were common in any variation of the programs.	
Activities	 In this role I: Created and executed test scenarios to validate business changes, including test data analysis and preparation. Set up environments for testing using Apache Tomcat, IBM WebSphere and Red Hat JBoss. Used Maven Java projects to code automated tests with Selenium webdriver and JBehave tor user-based test design. 	
Results	 Achievements in this role were: Kicked off the first automated test suite of the long running In Control project. Seamless coordination of testing efforts among teams from different locations and time zones. Well mentored new team members on the project practices and business. Mastercard High Five Award for commitment and quality of service. 	
Technologies	Java, Eclipse, Maven, Selenium, JBehave, Junit, Tomcat, WebSphere, JBoss, Page Objects, Rally (ALM), Scrum, Kanban.	
Jan/2013 – Sep/2014	Test Lead Global Village Telecom – Products Customization	
	GVT is a company that offers high-speed broadband across its area of operation, paid TV with high-definition channels, as well as integrated and convergent advanced landline telephony. TV services became available later in the roster of products, so most projects at the time were focused on adapting legacy systems to accommodate the new range of services and combination of products.	
Situation	New products, combos and promotions were set up and configured via one single application, the project I worked on had to include these items into the application and make them customizable.	
Task	As a Test Lead, I was responsible for identifying test scenarios based on requirements, setting up test data and coordinating test execution with an onsite testing team.	
Activities	 In this role I: Created and executed test scenarios (HP Quality Center) to validate business requirements, including test data analysis and preparation (SQL). Generate Daily Test Status reports and manage physical boards for upper management. Define Test Plans and Strategy based on project needs, staff and schedule. Set up test environments that simulated real world telecommunications hardware. Managed test execution and defect reporting and lifecycle. 	
	 Defined Testing Frameworks based on experience that helped elevate the whole QA

Apr/2005 – Mar/2008	Test Analyst Electronic Data Systems – Commonwealth Bank of Australia Cards
	EDS despite being a subsidiary of General Motors since the 1980s, had a wide range of industries for which it provided Information Technology services.
	While in the company, I entered the Quality Assurance realm for the first time as a Test Analyst mainly due to my fluency in English (which was required since most of the projects were outsourced).
Situation	The Commonwealth Bank of Australia had just strengthened its relationship with EDS going from hardware and processing provider to also include service oriented contracts. This aimed to deliver more efficient operations, significant service improvements and cost savings across the bank.
Task	As a Test Analyst, I was initially responsible for writing and executing Test Cases for credit card operation projects, opening defects and managing test evidences; and later for reviewing business requirements and extracting test scenarios.
Activities	In this role I: Wrote and executed test cases in step-by-step model. Opened defects and tracked their lifecycle throughout the project. Provided evidence of execution and retests when required.
Results	Achievements in this role were: Deep understanding of the importance and workflow of Testing activities. Very detailed project documentation with no room for ambiguities. Strong client satisfaction with applications' quality delivered.
Technologies	HP Quality Center (ALM), MS Excel, Waterfall.
